US 4549308 A

(58) Field of search by ISA

US CL. 380/21,23,28,43,44,46,47,48,49,50, 455/33,  
375/107,110,112. 370/103,105,107, 379/59,60.

## (54) Authentication system for digital cellular communications

(57) A system for the authentication of mobile stations and base stations in a cellular communications network. The system includes an algorithm which generates not only a key dependent response to a random challenge, but also a temporary conversation key or call variable which may be used to encipher traffic in the network. To protect against clones in the network, the algorithm uses a rolling key which contains historical information. A bilateral authentication procedure may be used to update the rolling key and to generate a new conversation key.
